

Welcome to Your Slidew Teacher Panel!

This comprehensive guide will walk you through setting up your classroom and tracking student mastery.

Step 1: Setup Your Classroom

From your main [Teacher Dashboard](#), you can manage your classes and students.

Create a Class: Click the "Create a New Class" button to start.

Class Naming: Use clear names like "Grade 7A - Math" and academic years in YYYY-YYYY format (e.g., 2024-2025).

Add Students: Once a class is made, click the "Students" button. Use the form to add students individually, or use the "Upload Student List (CSV)" for bulk import.

CSV Format: Create a CSV file with exactly 2 columns (no headers needed):

FamilyName,FirstName

Smith,Jane

Johnson,Mark

Important Security Note: The system automatically generates secure login IDs and passwords for each student. Students should change their passwords after first login at the [Student Login Page](#).

Step 2: Create Custom Game Content

This is the core of Slidew! Go to the " **Manage Game Content**" page from your dashboard.

Manual Creation: Click "+ Add New Category" to open the cell-based editor. This is perfect for

creating levels from a specific vocabulary list.

Automated Creation: Use the powerful " **Curriculum Assistant**"

Paste text from your lessons or Upload a file content (.txt, .docx, .pdf), and the assistant will:

Automatically detect valid sentences

Remove punctuation and formatting

Prepare ready-to-use game levels

Let you import with one click

Step 3: Distribute Credentials

After adding students, download the credentials CSV from your class page:

Download Generated Credentials (CSV)

This file contains each student's:

Automatically generated login ID

Unique secure password

Step 4: Track Student Mastery

As students play the games you've created, their performance is automatically tracked. Click the yellow **"Progress"** button for any class to access the powerful progress dashboard.

Understanding "Personal Best": The progress report doesn't show every repeated attempt. It intelligently displays each student's single **best performance** for every level (based on fastest time, then fewest moves). This allows you to track their true mastery, not just their practice.

View and Sort: See a summary of your entire class and sort students by levels completed, total time, or total moves to identify top performers.

Drill Down: Click on any student to see a detailed breakdown of their progress in each category, complete with visual progress bars.

Export Data: Use the "Export (CSV)" buttons to download performance data for your records.

Reset a Level: If a student struggled on a level, you can "Reset" their personal best score for that specific level, giving them a fresh start to prove their mastery.

Step 5: Manage Your Class

You can always:

- Edit class name and academic year

- Delete individual students or the entire class

- Regenerate passwords when needed and download list of students along passwords

- Track student progress in real-time and export as csv file

You're all set! If you have any questions, feel free to [Contact Us](#).
